

## Compression Molded Rubber Parts

Compression molded rubber parts are manufactured in custom shapes holding tolerances within 0.1mm. This manufacturing method is suitable for complex components needed at high volumes. Compression molded rubber parts are highly durable, flexible, and also heat resistant. Contact Marian to source your compression molded rubber components.

# Precision Compression Molded Components

---

## MATERIALS

- Silicone Rubber
- Fluorosilicone
- Additive electrically conductive compounds
- With or without PSA

## APPLICATIONS

- Sealing
- Insulation
- Slip Resisting
- Wear Resisting

## COMMON MARKETS

- Automotive Electronics
- High Speed Trains
- Computers
- Hand-held Electronics
- Medical Electronic Devices

## WHY MARIAN?

- Extensive Application Knowledge
- Global Support, Local Solutions
- Tight Tolerances
- Quick Response Times

A global leader in providing precision component parts composed of thin flexible materials. We understand that every component plays a critical role in the performance of your device. Our sales and engineering teams are strategically deployed throughout the North America, Asia and Europe to support material selection, design and logistics decisions.
