MATERIAL SPOTLIGHT

3M™ 7070UV - Long-Term Surface Protection

What is 3M[™] 7070UV? This transparent, highly durable, urethane protective film provides long-term protection to shield products from daily wear and tear. 7070UV forms a strong bond with the outside layer of your products to help maintain a "like new" appearance for longer.

7070UV is conformable and features flexibility that adheres to curved surfaces and a wide variety of substrates, including metal, wood, plastics, painted surfaces and composites. Unlike many other surface protection materials that are temporary, this material is meant to be a semipermanent fixture to protect product aesthetics.

Preferred Converter

Features of 3M 7070UV:

- Clear color will not obscure surfaces
- Available in 0.20 mm (7070UV) or 0.36 mm (7071UV) thicknesses
- Protects products from damage caused by weather, abrasion, scratching, erosion, UV, and minor impacts
- Urethane material provided on paper liner, allowing for easy die cutting of shapes

Benefits of Die Cutting 3M 7070UV:

- Applied easily, quickly, and accurately to complex surfaces
- Parts can be supplied kiss-cut on rolls or individualized on extended liners for ease of application
- Parts are consistently cut to tight tolerances
- Parts can be manufactured with tabs for ease of placement
- Parts can be integrated into automation process
