

Solutions for **RAPID DIAGNOSTIC TESTING**

Point-of-care and rapid diagnostic testing are increasingly important in the areas of disease detection, treatment monitoring, and preventative care. It is imperative that components of these devices and test kits are reliable and of the highest quality.

Marian is a global leader in manufacturing precision die-cut solutions for rapid diagnostic testing. Marian has a sophisticated quality system as well as clean room manufacturing capabilities. Marian is FDA registered and certified to ISO 9001, ISO 13485, and cGMP compliant.

SOLUTIONS

- Tapes used for bonding / construction of the analyzing device
- Hydrophobic / hydrophilic films for wicking
- Membranes used in fluid separation
- Adhesives, films, and foils for flow path sealing
- Reagent sealing
- Components and layers for diagnostic test strips
- Venting materials for pressure equalization
- Precision-cut foams for cushioning, spring / push-back
- Light sealing during magnification
- Printed labels for test identification
- Skin-contact medical grade tapes
- Manufacturing expertise in automated placement
- Precision tight tolerance slitting
- Sputtering of thin films with metals, oxides, nitrides, alloys

Marian provides solutions for the following areas of Rapid Diagnostic Testing:

- Analyzer Hardware / Electronics
- Test Cassettes
- Specimen Collection Devices
- Consumables
- Lateral Flow Tests
- Wearable / Skin Contact

A global leader in providing precision die-cut component parts for customers across many markets all over the world.
